1 How to convert a MS Word document to LaTeX

Here are some tools and techniques that can be used to (*try to*) convert a MS Word document to simple (and **pretty**) `LaTeX` (more precisely, to LaTeX2*e*).

1.1 Tools on Linux

Writer2LaTeX. I tried the version 1.2.1 (2014-08-04), it works but is really not good enough to be *really* used. Too bad ! It requires to go from `.docx` to `.odt` (LibreOffice can do it), then from `.odt` to `.tex` (and then compile it to `.pdf`, *ie* a PDF document, thanks to pdflatex) This tool was tested on Ubuntu, and should work on any *Debian*-like.

1.2 Tools on Microsoft Windows

These tools were **not** tested (I do not use MS Windows...).

- Word-to-LaTeX Converter which seems to be pretty good (and direct download),
- Word to LaTeX Converter 2.30 which seems to be a little weird (ugly website),
- Word2TeX, 30 days trial (and direct download), which seems to be OK even if not free (and not open-source),
- Word-to-LaTeX,
- docx2tex as a small executable (**be cautious** about virus or trojans).

1.3 Online tools : None !

1.4 Tools on Mac OS

These tools were **not** tested (I do not use Mac OS...). This small page can help.

1.5 Some references

- This question on TeX StackExchange.com,
- This onther one,
- That last question.

(Proudly compiled to **PDF** from a `HTML/Markdown` file (powered by `StrapDown.js`) with **strapdown2pdf**, `v0.5`.)
